# Nano Banana Prompt Library

## 1. Generate a moodboard

Use the first image @img1 as material references only. Create a minimalist, realistic still-life composition inspired by the second reference image. Arrange all materials vertically and horizontally in a harmonious layout with soft daylight, neutral background, and natural shadows. Include textures exactly as in the reference (wood, travertine, stone, ceramics, and branch). Lighting should feel calm and diffused, with a balanced, design-focused mood.

## 2. Stage an interior with real furniture

Furnish this raw Parisian Haussmann apartment @img1 exactly as shown, keeping all architecture, lighting, and perspective unchanged. Use the attached furniture pieces: modular white sofa @img2, travertine coffee table @img3, green side table @img4, graphic rug @img5, striped wooden armchair @img6, and pendant light @img7. Arrange them in a balanced, realistic layout with soft daylight and natural shadows, in a warm contemporary Parisian style.

## 3. Colorize your architectural drawings

Recreate this axonometric drawing @img1 as a hyper-realistic render with accurate materials and colors. Keep every detail exactly the same, do not modify the geometry, proportions, furniture, or people. Apply realistic glass, concrete, wood, greenery, and interior finishes while preserving the original design. Maintain a pure white background with no environment or sky, so the focus remains entirely on the building. Ultra-detailed, photorealistic lighting, soft shadows, clean professional rendering.
